

Equipment Mounting Supports

Thybar Equipment Mounting Supports are factory fabricated sheet steel structural members designed for placement on all types of roof systems and at the same time accommodates a variety of roof mounted heating, ventilating and air conditioning equipment. These units have a high load-bearing capacity attained by a system of internal bulkheads welded into position at specific intervals along the length of the rails.

A continuous wood nailer covered by a removable counterflashing provides for an effective method of attaching roofing felts and assuring a watertight installation.

Equipment Supports are fabricated in three basic styles designed for the following applications:

TEMS-1

For insulated Roof Decks with 3" cant and variable step to match deck insulation thickness.

TEMS-2

For Non-Insulated Roof Decks with 3" cant.

TEMS-3

For All Types of Roof Decks

Standard Construction:

1. 18 Ga. Galvanized steel shell, base plate and counterflashing
2. Factory installed wood nailer
3. Internal bulkhead reinforcement
4. All welded construction

Added Options:

- 5.
- 6.
- 7.
- 8.
- 9.

* 8' Span

Data was obtained from standard production samples and contains a safety factor of 2. Thybar Corporation can certify load conditions not covered above upon request.

All concentrated loads are based on a minimum bearing surface width of 4" by the full width of the supports. A minimum spacing of two feet will be required between combination loads, which exceed the recommended maximum values. No load should be applied on cantilever section in excess of 6 inches in length.
