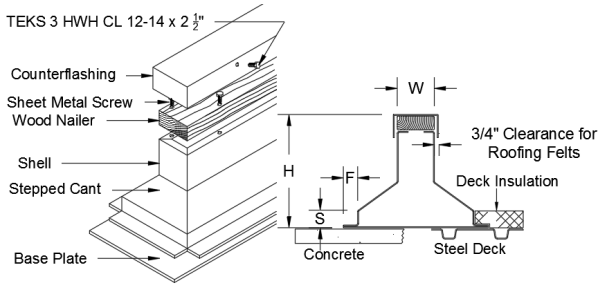
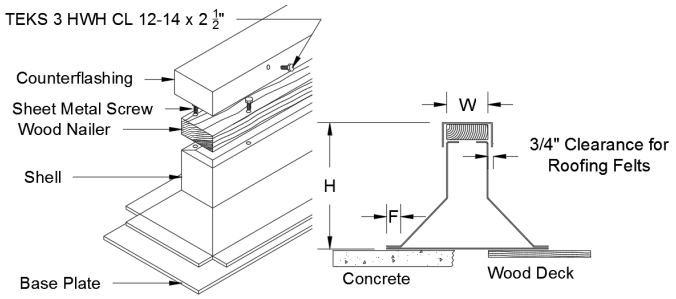
Thybar Equipment Mounting Supports are factory fabricated sheet steel structural members designed for placement on all types of roof systems and at the same time accommodates a variety of roof mounted heating, ventilating and air conditioning equipment.
These units have a high load-bearing capacity attained by a system of internal bulkheads welded into position at specific intervals along the length of the rails.
A continuous wood nailer covered by a removable counter flashing provides for an effective method of attaching roofing felts and assuring a watertight installation.
Equipment Supports are fabricated in three basic styles designated for the following applications:



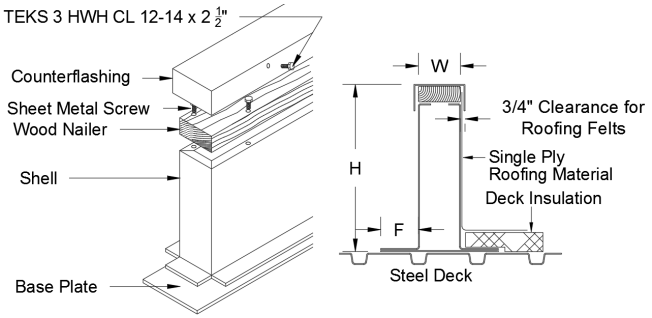
TEMS-1

For Insulated roof decks with 3" cant and variable step to match deck insulation thickness.



TEMS-2

For Non-insulated roof decks with 3" cant



TEMS-3

For all types of roofing decks

**Standard Construction**

18 Ga. Galvanized steel shell, base plate and counterflashing
Factory installed wood nailer
Internal bulkhead re-inforcement
All welded construction

**Added Options**

1
2
3
4
